# Delivering Security & Control

SAFLOK<sup>™</sup> gives you access control flexibility over your entire facility.

## SAFLOK<sup>™</sup> MT<sup>™</sup> Lock

SAFLOK MT<sup>™</sup> locks are multi-technology capable, reading smart, memory, and magnetic stripe cards. The locks are stand-alone and battery-powered. The MT locks are durable and designed for modular repair/replacement.

MT lock features:

- Custom circuit assembly
- Non-volatile FLASH memory that logs more than a year's worth of lock data (or up to 5,900 entries)
- Makes detailed audit trail reports that include entries by time, date, and keycard holder
- Easily uploads new software features as they become available
- Reads high-coercivity (HiCo) cards that SAFLOK makes available for facilities that require keycards with extended use-life. SAFLOK also provides HiCo encoders for use with HiCo keycards

For high-end facilities, ädäsē presents a sleeker and more sophisticated appeal. The lock's LED lights are flush-mounted on the card slot.

Override (MKO)<sup>®</sup>

## System 6000™

SAFLOK's System 6000™ is a Windows-based system that provides the security of an access audit system and superior control throughout your facility.

System 6000 offers the following benefits:

- It is menu-driven to ensure fast and easy operation
- Username and password protection restricts access/authorizations, with multiple levels of authorization for user tasks
- If a key is lost or stolen, System 6000 allows staff to quickly replace lost/stolen keys and cancel the old keys
- Keys can be deleted for individual users instead of user groups
- Allows integration with property management systems (PMS)
- Keycards are programmable to provide perimeter access only to those individuals with valid keycards
- Provides detailed system reports such as key-making transactions, key user and user group authorizations, keys issued reports, etc.
- Updates software when new updates become available
- Makes minor on-site design changes

## One Card Does It All

A single "smart" keycard gives secure access to:

- Billeting rooms
- Perimeter entrances
- Operations and training facilities

A single keycard can be used as:

- Identification
- Access control

The use of smart and memory cards provides:

- Expanded memory and usage/audit information
- The ability to store and report use history
- Multiple keycard levels that can include billeting keys, zone keys, latch/unlatch keys, master keys, one-shot keys, and MKO for emergency access
- Keycards that are easily programmed to only work during specific times/shifts and days of the week

# Mechanical Key Override (MKO®)

SAFLOK MT with the standard concealed MKO

SAFLOK MT with the optional SFIC MKO

SAFLOK offers the standard concealed mechanical key override (MKO®) and the optional small format interchangeable core (SFIC) MKO as specified options for its' MT lock. Using the mechanical override feature, electronic security can be overridden to allow use of the mechanical key. The concealed element of the standard MKO is a design option that refines the aesthetic appeal of the lock.

Both the standard MKO and the optional SFIC MKO have the following features:

- Enables emergency access
- Enables post-vandalism access

**Note:**

Arrow, Best, Falcon, InstaKey, Kaba, Keymark, KSP, and Schlage are all compatible SFIC brands.
